

List of Professionals for Sewerage System Regulation

On May 31, 2005, the new *Sewerage System Regulation* (Regulation) came into force for site assessment, planning, design, installation and maintenance of on-site sewerage disposal systems, under the *Health Act*. *Professionals* may undertake Type 1, Type 2, and Type 3 systems. *Registered practitioners* may only undertake Type 1 and Type 2 systems. Together, *professionals* and *registered practitioners* are referred to as *authorized persons* under the Regulation.

APEGBC has prepared a list of professional engineers undertaking services as *professionals* under the Regulation, complete with contact information for the Health Authorities receiving filings and also for the general public who require the services of a professional engineer in this area.
